

Silicone Defoamer DCA-378

 dcachem.com/portfolio/silicone-defoamer-dca-378

Introduction

DCA-378 is a modified silicone defoamer with strong anti-foam and defoaming abilities. It significantly reduces bubble formation during both the production and application processes of coatings, while offering excellent compatibility.

Physicochemical Data

- Chemical composition: Modified polysiloxane solution
- Appearance: Colorless transparent solution
- Active content: 1%
- Solvent: 2,2,4-Trimethyl-1,3-pentanediol diisobutyrate

Product features

- DCA-378 is highly effective in solvent-based coatings systems, with strong anti-foam and defoaming capabilities.
- DCA-378 has excellent compatibility, ensuring no impact on the transparency of the paint film.
- DCA-378 is versatile and suitable for a wide range of common coating systems.
- It is easy to incorporate into formulations without affecting production or application.

Application areas

DCA-378 is suitable for various solvent-based coatings and UV curing systems.

Similar Products: BYK-066N, EFKA-2035, TEGO-931

Our products have a good cost-performance ratio, receiving positive feedback from customers in China and overseas markets.

Addition Method

The recommended dosage varies depending on the system, typically ranging from 0.1% to 1% of the total formula. It can be added at any stage of production.

Packaging and storage:

25KG iron drum, stored in a cool and dry place.

Note: The purpose of this manual is to provide basic product information to technical personnel involved in the development of coatings, inks, pesticides, and other industries. It is intended for research and reference use and does not carry any warranties. Please conduct preliminary tests to assess its suitability.
