

Rheology Modifier DCA-6220

dcachem.com/portfolio/rheology-modifier-dca-6220

Introduction

DCA-6220 is a polyurea compound rheology modifier that is suitable for water-based coatings. When mixed into the system, it establishes a false plasticity, thereby preventing settling and sagging through thixotropy. It is widely used in anti-settling of various industrial primers, and its compatibility needs to be considered when used for anti-sagging of clearcoats.

Physicochemical Data

- Chemical composition: Polyurea compound
- Appearance: Light yellow viscous solution
- Active content: 50%
- Solvent: N-Methyl-2-pyrrolidone

Product features

- Anti-settlement for priming paint
- Anti sagging for varnish , it should test its compatibility before use it

Application areas

Suitable for various water-based coating systems

- Water system coating
- Water system ink

Similar Products: BYK-420

Our products have a good cost-performance ratio, receiving positive feedback from customers in China and overseas markets.

Addition Method

The dosage varies according to different application systems. For anti-settling, the recommended dosage is 0.1-0.7%, and for anti-sagging, the recommended dosage is 0.5-3.0%. It is recommended to add it after other materials have been added.

Packaging and storage:

25KG iron drum, stored in a cool and dry place.
