

Hammer Agent DCA-1490

 dcachem.com/portfolio/hammer-agent-dca-1490

Introduction

DCA-1490 is an organic modified polysiloxane solution used as a hammer pattern additive in water-based and solvent based paint systems, providing excellent hammer pattern effects. At a very low dosage, a detailed hammer pattern effect can be produced. The pattern is thicker at low dosage, and finer at high dosage.

Physicochemical Data

- Chemical composition: Organo-modified polysiloxane
- Appearance: Colorless, viscous, transparent solution
- Active content: 10%
- Solvent: mixed aromatic hydrocarbons

Product features

Excellent hammer effect

Application areas

Suitable for all solvent based systems such as solvent based aluminum powder paint, baking paint, air dried alkyd paint, and water-based systems.

Similar Products: DC-61

Our products have a good cost-performance ratio, receiving positive feedback from customers in China and overseas markets.

Addition Method

It can be added at any stage of production

Recommended dosage: 0.1-1.0% of the total formulation, generally 0.3-0.8% of the total formulation in most cases.

Packaging and storage:

25KG iron drum, stored in a cool and dry place.

Note: The purpose of this manual is to provide basic product information to technical personnel involved in the development of coatings, inks, pesticides, and other industries. It is intended for research and reference use and does not carry any warranties. Please conduct preliminary tests to assess its suitability.
