

Adhesion Promoter DCA-7200

dcachem.com/portfolio/adhesion-promoter-dca-7200

Introduction

DCA-7200 is an adhesion promoter specifically developed for baking paint systems. It exhibits good compatibility with baking paint and can participate in the cross-linking reaction of the paint. It enhances the adhesion of the paint film to non-ferrous metals while improving water resistance, salt spray resistance, flexibility, and impact resistance of the paint film.

Physicochemical Data

- Chemical composition: Special polyester compound
- Appearance: Colorless viscous solution
- Active content: 75%
- Solvent: Isopropanol

Product features

- DCA-7200 improves the adhesion of paint films to various difficult-to-adhere metals such as aluminum, zinc, stainless steel, and plated surfaces.
- DCA-7200 increases the extensibility and impact resistance of the paint film
- DCA-7200 does not change color when exposed to high-temperature baking
- Improving Salt Spray Resistance, Water Resistance, and Humidity Resistance of Paint Films

Application areas

DCA-7200 can be used in acrylic amino baking paints, alkyd amino baking paints, polyester amino baking paints, two-component polyurethane coatings, and other systems. It is not suitable for self-drying systems.

Our products have a good cost-performance ratio, receiving positive feedback from customers in China and overseas markets.

Addition Method

The recommended dosage is between 0.1% and 5%, and it can be added before or after other components.

Packaging and storage:

25KG plastic drum, stored in a cool and dry place.
